Jamil Hawwash AI Engineer

jamilhawwash9@gmail.com +971 52 119 5199 Al Bateen, Abu Dhabi linkedin.com/in/jamil-hawwash
github.com/JHawwash jhawwash.github.io

AI Engineer specializing in production-grade AI systems, real-time voice agents, multi-lingual RAG pipelines, and intelligent automation. Experienced in building end-to-end solutions that reduce manual workflows and scale real-world applications.

Technical Skills

Programming: Python, SQL, R, C++

Backend & Data Systems: FastAPI, REST APIs, SQLAlchemy, Microservices, RabbitMQ, PostgreSQL, MongoDB, Redis, Qdrant, Vector Databases

Automation & Integration: n8n, Genesys, Salesforce, Selenium, Power Automate

AI & ML: RAG, LLMs, AI Agents, Prompt Engineering, Strands, Pipecat, Vapi, AWS Bedrock, Haystack, PyTorch, TensorFlow, Scikit-Learn, OpenCV

Cloud & DevOps: AWS (Lambda, S3, CloudWatch, SES, Sagemaker, DynamoDB, SNS, SQS, EMR), Docker, RunPod, Git, MLOps, CI/CD

Data Engineering & Analysis: Pandas, NumPy, PySpark, Excel, Power BI, Matplotlib, Seaborn

Professional Experience

AI and Automation Engineer, Modon Holding (via Dautom) 04/2026 – Present | Abu Dhabi, UAE
- Architecting multi-channel RAG chatbot agents for WhatsApp, Instagram, and Messenger using AWS Bedrock, Strands, Python, Lambda, DynamoDB, S3, SNS, SQS, and CloudWatch, supporting a $100M+ real estate sales pipeline through automated customer engagement.
- Developing tool-calling workflows for lead creation, qualification, customer research, media retrieval, and SPA/SOA document fetching via Salesforce APIs, reducing manual sales and support effort by ~40%.
- Integrating AI agents with Genesys and Salesforce to connect conversational channels with CRM workflows, enabling structured lead handoff and cutting average enquiry response time.
- Building AI-powered outbound voice agents with n8n and Vapi to automate payment reminders and re-engage inactive leads through dynamic qualification conversations.

AI Engineer, Egnite (AI Startup) 06/2025 – Present | Amman, Jordan
- Developed and deployed end-to-end multilingual RAG-based AI voice agents using Pipecat, Haystack, Qdrant, and Gemini/OpenAI Realtime, leveraging function calling to automate scheduling, ticketing, and support workflows, reducing manual agent handling by ~35% for enterprise clients.
- Containerized and deployed real-time speech pipelines, training custom XTTS voice models using Docker on RunPod and AWS, achieving sub-500 ms transcription latency and production-grade Arabic speech synthesis.
- Built and scaled backend microservices for ticketing, scheduling, and notifications using Python, SQLAlchemy, FastAPI, and AWS (S3, SES), supporting 5k+ automated interactions per month with high service reliability.
- Optimized prompt design and multilingual dialogue flow across Jordanian, Iraqi, and Saudi Arabic dialects, improving contextual accuracy and user satisfaction by ~25% while reducing fallback rates by ~30%
- Implemented a system-wide health monitoring and alerting framework for microservices and external AI providers (OpenAI Realtime, ElevenLabs, Azure), enabling rapid failover and preventing customer-facing service disruptions via automated email and WhatsApp alerts.

Projects

AI-Powered WhatsApp Chatbots with n8n (Client Projects)
- Designed and deployed AI-powered WhatsApp chatbots using n8n, Twilio, and OpenAI API to automate customer engagement and internal knowledge workflows for multiple clients.
- Built a dental clinic chatbot handling FAQs and appointment bookings, integrating LLM processing with Google Sheets for structured patient data storage, reducing manual reception workload.
- Developed a marketing agency solution including a client-facing FAQ assistant and an internal HR chatbot providing policy and document retrieval, streamlining employee support and response times.

Real-Time Driver Drowsiness Detection
- Developed a CNN model with a robust architecture using TensorFlow to detect drowsiness from facial cues.
- Trained the model on our own dataset, consisting of 2,000 images from volunteers, achieving an accuracy of over 95%. Used techniques like data augmentation to decrease overfitting.
- Deployed the model on Raspberry Pi with a camera and buzzer connected for real-time detection and alerts.

Education

BSc. Data Science & Artificial Intelligence 09/2020 – 07/2024 | Amman, Jordan
Princess Summaya University for Technology

Certifications and Awards

1st Place Hackathon Winner - AWS Innov8 Bahrain
- Co-developed an AI-powered medical chatbot for OSCE exam simulation; earned 1st place out of 20 teams for innovation and real-world applicability.

Change Management - TAAEEN

Languages

- English
- Arabic

Additional Information

- UAE Golden Visa Holder
- Driving License
